

### **ABSTRACT OF DISCLOSURE**

5 A lock adapter for an ammunition can having a clamp lever with an aperture  
includes a rod element received through the aperture and mounted to a side of the can.  
The rod element incorporates a relieved portion on an end opposite the side of the can  
and has a length and diameter sized in combination with the relieved portion for  
clearance of the aperture through an angular displacement of the clamp lever for opening  
the can. A hole substantially perpendicular to an axis of the rod receives a padlock. A  
10 bolt received through a drilled hole in the side of the can engages a tapped bore in the  
rod. A Bellville washer is placed on the bolt between the side of the can and the head of  
the bolt. The Bellville washer includes a sealing gasket adjacent the side of the can to seal  
the bolt and bolt hole preventing moisture from entering the can.
